CONDITIONS OF SALE

The prices in this catalog cancel all previous prices and are subject to change without notice. All orders for stock are subject to prior sale.

GUARANTEE

This is governed by the Pennsylvania Nurserymen's Association Uniform Retail Replacement Agreement which is as follows: "Provided account is paid within thirty days and plants receive reasonable care, we will replace at one-half price of the plants, plus cost of planting, plants planted in the spring that fail to survive the following summer, or if planted in fall, fail to leaf out the following spring."

Should we not have the same plants in stock, we reserve the right to give credit for an amount equal to one-half the cost of the plants lost, in other plants of your selection. We do not guarantee plants transplanted by us on a customer's property.

DELIVERY CHARGE

Prices on Nursery Stock does not include delivery except on large truck load quantities.

GUARANTEE OF GENUINENESS

All plant materials are warranted by us to be true to name and in a healthy condition. If any stock proves untrue to variety name or to our description under which sold, we will, upon proper evidence, replace the stock at no cost or refund the full purchase price. We shall in no case be responsible for any sum greater than the original purchase price.

TERMS

To those having established credit, we are pleased to extend our regular thirty-day terms. Orders for C.O.D. shipments must be accompanied by at least one-third of the amount of the order.

COMMENTS

Our nurseries located 7 miles west of Butler, on Route 422, are one of the largest in the state and we cordially invite you to visit them.

We grow over 500 varieties of trees and shrubs all of which must be perfectly hardy to endure our Western Pennsylvania winters. You may come to the nurseries any day except Sunday and select the material that you like, or if you can't come any other day in the week, you are invited to drive through them on Sunday.

The quality of the stock furnished by us is superior to that sold by so many brokers, who call themselves Nurseries, and who rely upon supplying cheap southern grown stock. The cost of growing plants in this climate with our short summer is far more than that of the south and in many cases we simply can't compete when price alone is considered, but we take pride in growing and selling quality plants as has been done by our family since 1870.

We are Growers of fine Nursery Stock (Nurserymen) and are not Landscape Architects. We are happy to give advice on the selection of plant material, but do not make planting plans. We recommend the services of Professional Landscape Architects for detailed plans for large homes, estates, and industries. It is money well spent.

HUMUS:—"Eisler's Humus"

This is a fine grade of Peat Humus produced in Mercer County. It is a splendid conditioner and acts as a sponge in retaining moisture in the soil. Use it as a top dressing or mix it with your soil in preparing a seed bed. It is a splendid mulch for Azaleas, Ilex, Laurel, and Rhododendrons. It lacks the fertilizing qualities of Mushroom Manure but is higher in organic content.

MANURE:—MUSHROOM MANURE

Mushroom Manure is real stable manure to which has been added 20% of rich top soil and then used to grow one crop of Mushrooms in the huge limestone caverns at West Winfield in Butler County. The heat of fresh manure is gone, but the organic content and fertility of a good barnyard manure is retained.

The high organic content, almost five times that of top soil, is quite valuable in loosening heavy soils and increasing the moisture retention value. It is a long time source of mineral elements which are released gradually through decomposition into the soil.

A two-inch layer of Mushroom Manure mixed with clay excavation soil will produce a good lasting turf. This makes a much lower cost lawn than the hauling in of some low grade so-called top soil. This has been proven over and over again. It will produce a good lasting turf almost weedless.

For use on a vegetable, or flower garden we recommend from two to four inches spaded into the soil. A generous application will supply your garden with ample plant food for a long time. It loosens the soil, retains moisture and promotes growth. For mulching, or placing around any established plants, we recommend from one to two inches. For roses, it should be placed down in the bed on planting and then use some to mulch them every fall for winter protection. As a top-dressing for lawn either in the fall or winter, we recommend from $\frac{1}{4}$ to $\frac{1}{2}$ inch. It is also used by many gardeners to cover newly seeded lawns to keep them from drying out after seeding.

Mushroom Manure lacks the filth, odor and disease spread in ordinary stable manure for it is sterilized before entering the Mushroom growing plant. This process also kills nearly all weed seeds found in ordinary barnyard manures.

MANURE:—"MUSHROOM MANURE"

We furnish and deliver Spent Mushroom Manure anywhere within a radius of 150 miles from Butler. The delivered cost is based on the mileage from our plant near West Winfield. Our delivery trucks are large and haul 15 or 25 cubic yards per load. A fifteen cubic yard load weighs from 7 to 8 tons. If you wish a smaller quantity than fifteen cubic yards, please send your own truck to our plant at West Winfield, or call your local Nursery, or landscape gardener. Write or call our Butler office for delivered prices.

Many firms haul their own Mushroom Manure from our plant at West Winfield which is located not far from Saxonburg at the South-East corner of Butler County. We load trucks daily except Sunday at West Winfield. The hours of loading are from 8:00 A.M. until 4:00 P.M. When you haul your own, you save the cost of transportation.

LARGE SPECIMEN TREES

We have hundreds of large specimen shade trees of various sizes and varieties growing in our own Nurseries in Butler County which are available for the home owner who wishes immediate shade and who does not wish to wait for years in order to enjoy the beauty and comfort of them.

We are prepared to furnish and plant large Maple, Oaks, Sweet Gums, Honeylocust, Lindens, Ginkgos, Dogwood, Ash, Sycamores, Hawthornes, Elms, and others. We invite your inspection.

Our price of planting large trees includes the digging of the hole, the cleaning up of the debris from the excavation, delivery and installation of the tree, furnishing of planting compost as required, the pruning, guying, and mulching. Trees furnished and planted by us are guaranteed to live for the first year after planting providing they are given reasonable care by the home owner. Trees destroyed by vandalizm or by other reasons beyond our control void our guarantee.

TIPS TO THE HOME GARDENER:

1. Plan your planting: The planning of your home grounds is important. We will gladly help you plan your planting, but money spent in hiring professional Landscape Architects is money well spent. They can help you in making the right selection of plants for your property.
2. Hardiness: Plants grown by us are winter hardy. Plants grown in the South generally will not stand our cold winter weather and freeze back to the ground.
3. Prepare a generous sized hole for all planting. The hole size which we recommend is found in our schedule of planting costs. Remove all stone, subsoil, etc., and plant only in good topsoil or planting compost.
4. Drainage of holes: Planting pockets, or holes must have drainage. The heavy clays in Western Pennsylvania often are so dense that they will not drain and the water in the hole becomes stagnant and the roots of the newly planted trees and shrubs will rot. Provide drainage for all holes if necessary.
5. Planting depth: Plant new plants at the same depth as they were growing in our Nursery. Do not plant deeper for good results.
6. Watering: Water newly planted trees and shrubs real well when first planted and then about once a week for the first season after planting. Evergreens should be watered in the fall season and should not go into winter with dry soil around the roots.
7. Pruning. All newly planted deciduous trees and shrubs should be pruned immediately after planting. They should have the branches cut back about one third which will promote root growth first and give you better results.
8. Guying: It is best to securely stake newly planted trees to keep them from whipping back and forth and breaking the new roots.
9. Mulching: A good heavy mulch of two to three inches of Mushroom Manure, Peat Moss, or Rotted Sawdust will retain the moisture in the ground, promote growth, and prevent weed growth.
10. Fertilizing: New plants will thrive better if fed about once a month during the first summer with a soluble fertilizer. There are many brands on the market with different analysis so please follow the directions.
11. Spraying. Never spray trees or shrubs when the temperature is above 80 degrees and the sun shining. The foliage may be burned. Spraying is not necessary if your plants have no disease or are being attacked by insects.

TIPS TO THE HOME GARDENER:

12. Ground Covers: Carpets of English Ivy, Pachysandra, or Periwinkle provide a beautiful touch for all evergreen planting.
13. Pruning of Evergreens: Evergreens may be pruned at any time of the year. Fast growing ones should be pruned two or three times annually.

INFORMATION FOR THE HOME GARDENER:

Japanese Beetle Control and other grubs:

The best time to apply insecticides for control is before May 1st, or in the fall. Do not lime soil within several weeks following or preceding application with the exception of aldrin and dieldrin. All emulsions must be used as sprays. Most of the controls will last from 3 to 5 years, except arsenate of lead which lasts from 7 to 10 years. It takes from 3 to 10 weeks to kill grubs. Insecticides may be mixed with sand, or with organic fertilizers. Insecticides must be watered into the soil immediately after application and children and pets should keep off until after watering, or after a rain.

TREE AND SHRUB MAINTENANCE:

- * Plant all trees & shrubs at same depth as they were growing in the Nursery.
- * Mulch all new planting of trees & shrubs with a 3 to 5 in. mulch of Mushroom Manure to conserve the natural supply of water in the soil & keep weeds down.
- * Feed your Roses at 2 to 3 intervals during the growing season.
- * Bonemeal is ideal fertilizer for bulbs. Use 1 tablespoonfull of bonemeal in each hole.
- * Never cut off the bulb foliage until it has yellowed or withered.
- * Use Scalecide to eliminate the scale insects during the dormant season. They are found on Lilac, Cotoneaster, Euonymus, Magnolias, etc.
- * Broadleaved Evergreen should receive a special acid plant food once a year and never use bonemeal, wood ashes, or lime.
